Professional Security Diagnostics Platform

Executive Summary

This security audit was conducted by **Vitaliy** using the Cybershield Solutions diagnostic platform. The assessment focused on identifying vulnerabilities, misconfigurations, and security risks on the target system.

Risk Assessment

Based on the scan results, the system risk level is **HIGH**. Immediate attention is required for critical vulnerabilities to prevent potential exploitation.

Scope & Methodology

- **Vulnerability Scanning:** Detection of CVEs in system packages.
- **Network Security:** Port scanning and service enumeration.
- **Configuration Audit:** SSH, SMB, and system settings review.
- **Log Analysis:** Review of system and authentication logs for suspicious activity.

SSH Audit Summary

Banner	SSH-2.0-OpenSSH_9.6p1 Ubuntu-3ubuntu13.16
Software	OpenSSH 9.6p1
Protocol	2.0

Algorithm Security Summary

Category	Secure	Weak	Unsafe
Key Exchange (KEX)	8	1	3
Host Key	3	0	1
Encryption	6	0	-
MAC	3	5	2

CRITICAL: Security Issues

- ✗ 3 dangerous Key Exchange algorithms detected: ecdh-sha2-nistp256, ecdh-sha2-nistp384, ecdh-sha2-nistp521
- ✗ 1 insecure Host Key algorithms found: ecdsa-sha2-nistp256
- ✗ 2 broken MAC algorithms (SHA-1/MD5): hmac-sha1-etm@openssh.com, hmac-sha1

Security Recommendations

- Configure KexAlgorithms to use only: curve25519-sha256, diffie-hellman-group-exchange-sha256
- Configure HostKeyAlgorithms to prefer: ssh-ed25519, rsa-sha2-512, rsa-sha2-256
- Configure MACs to use: hmac-sha2-512-etm@openssh.com, hmac-sha2-256-etm@openssh.com
- Disable SSH Protocol 1 completely (Protocol 2 only)
- Regenerate SSH host keys with stronger algorithms (ed25519, RSA 4096-bit)
- Enable StrictHostKeyChecking on clients
- Review and apply all removal recommendations from ssh-audit

Critical Findings

2 dangerous port(s) found open across network

127.0.0.1: 139/tcp (netbios-ssn), 445/tcp (microsoft-ds)

Security Recommendations

1. Restrict SMB/NetBIOS to internal network only - disable on internet-facing interfaces
2. Implement firewall rules to restrict unnecessary port exposure
3. Regularly scan network for unauthorized services
4. Use intrusion detection/prevention systems (IDS/IPS)
5. Keep all services updated with latest security patches
